**NOTICE OF ALLOWANCE**

***Allowable Subject Matter***

1. Claims 13-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

As per claim 13, it was not found to be taught in the prior art of performing a hierarchical encryption of a message containing an identification message of a mobile user by encrypting a part containing identification information of the mobile user in the message using an encryption key which is derived from subscription information of the mobile user. The encrypted message uses a public key of a home domain server and routing the encrypted message to a network to which the home domain server belongs, using home domain information. The actual identification information of the mobile user is concealed using a temporary domain specific identifier and performing mutual authentication of a mobile terminal and a plurality of network elements using a challenge message response exchange scheme.

As per claim 17, it was not found to be taught in the prior art of an encrypting section that performs a hierarchical encryption of a message containing identification information of a mobile user by encrypting a part containing the identification information of the mobile user in the message using an encryption key which is derived from subscription information of the mobile user. The encrypted message is encrypted using a public key of a home domain server and a transmitting section transmits to an access point mobile terminal accesses, in the mobile terminal, the encrypted identification

information of the mobile user, a challenge message for the access point, and a challenge message for the network and home domain information of the mobile user. A receiving section that receives from the access point, in the mobile terminal, a challenge message response for the access point and a challenge message response for the home domain server of the mobile terminal transferred by the access point.

As per claim 19, it was not found to be taught in the prior art of a receiving section that receives from a mobile terminal, encrypted identification information of a mobile user, a challenge message for the access point, a challenge message for a network and home domain information of the mobile user. A transmitting section transmits the encrypted identification information of the mobile user and the challenge message for the network to a home domain server of the mobile user using the home domain information of the mobile user, wherein the receiving section further comprises a section that receives from the home domain server of the mobile user, an access point response key, a challenge message response for a home domain server of the access point, and a challenge message response for a home domain server of the mobile terminal. The transmitting section further comprises a section that transmits to the mobile terminal, the challenge message response for the access point and the challenge message response for the home domain server of the mobile terminal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
